

I am writing to voice my concern over the proposed changes to the XM Satellite Radio Service. I am very concerned that a service that I choose to subscribe to and pay for is at risk of being affected by the National Association of Broadcasters, which represent radio that is freely available and "broadly" cast. The XM service provides to me and many of my friends and family a much broader choice of music, news, and local weather and traffic than any terrestrial radio station. I urge you not to limit XM's ability to provide to the subscribers all of the current channels.

Thank you

Mark Fullen
